

Dropship (type TB): Using a custom 600-ton hull, the dropship is able to transport two reinforced infantry companies into a warzone from orbit. The dropship carries vehicles on a one deck, and provides seating for up to 298 troops on another, however troops can travel within their designated vehicles if desired. It has manoeuvre drive-D and powerplant-D, giving the ship performance of 1-G acceleration. Fuel tankage of 10 tons supports the powerplant for four weeks. Adjacent to the bridge is Model 1/bis computer. There are four staterooms for occasional periods of long term use. One triple and three dual turrets are installed with a variety of weaponry. A 298-seat passenger deck sits above a 380-ton military vehicle deck. The hull is streamlined to allow for operations and planetary landings.

The dropship has a crew of 8: pilot-commander, navigator, engineer, loadmaster and four gunners. All sleep double occupancy. The ship costs MCr 119.55 and takes 24 months to build.

Dropship (type TB)		Tons	Price (MCr)
Hull	600 tons	-	48
Streamlining		-	6
Jump Drive	None	-	-
